- 2015-2020 Medicare in a Restructured Delivery System
NIH/National Institute on Aging P01AG032952 (MPI: McWilliams/Landon)
PI 2019- /Project Leader (\$5,518,484)
Successful integration of financing and care in the Medicare program is the single most important objective of health policy, and arguably, with its powerful budgetary implications, of social and fiscal policy in the US today. This Program Project lays out a forward-looking research agenda encompassing three areas: 1) innovative and comprehensive analyses of current initiatives around ACOs, 2) rigorous research on the current form of integration, the MA program which, as our research has shown, has demonstrated improved performance in recent years, and, 3) research on innovative beneficiary as well as provider payment policy.
- 2017-2020 Health Care Markets and Regulation Lab
Laura and John Arnold Foundation (PI: Chernew, Michael)
Project Leader (\$1,518,422)
Overall objectives: (1) Initiate specific, innovative, high impact projects that have the potential to meaningfully support the transformation of the American Health Care system. Research areas include: quality measurement, payment and delivery system reform, consumer behavior, risk adjustment and exchanges. (2) Develop core resources to support the aforementioned projects, move forward on existing work and enhance the visibility and impact of lab activities.
- 2015-2021 Effects of Expanded Coverage on Access, Health Care and Health in the South
NIH/National Cancer Institute 1R01CA189152 (MPI: McWilliams/Graves, John)
PI (\$3,599,922)
This project will provide timely and rigorous analysis of the effect of health insurance coverage expansions on health care use and outcomes among a large cohort of low-income adults in 12 southeastern states. Using a quasi-experimental research design, we aim to quantify the effects of coverage expansion through Medicaid and private health insurance exchanges on access to care, cancer screening and use of preventive clinical services (Aim 1); on self-reported health outcomes, mortality and use of emergent and inpatient care (Aim 2); and on cancer stage at diagnosis and quality of cancer care (Aim 3).
- Current**
- 2015-2022 Measuring the Clinical and Economic Outcomes Associated with Delivery Systems
Agency for Healthcare Research & Quality/National Bureau of Economic Research
U19HS024072 (PI: Cutler, David)
Co-Investigator
This project examines whether differences in the delivery of evidence-based care processes and clinical and economic outcomes can be explained by characteristics of organizations that can be understood and modified, or whether such outcomes are ‘residual’ characteristics of organizations that are hard to transfer.

- 2017-2021 Identifying Predictors of Hospital Admission from the ED Among the Elderly
Agency for Healthcare Research and Quality 1R01HS025408-01 (PI: Landon, Bruce)
Co-Investigator
This project examines predictors of hospital admissions to the ED among older adults with the goal to provide a foundation for designing interventions to safely reduce admissions.
- 2019-2023 Comparing Targeted and Non-Targeted Approaches to Improving the Value of Cancer Care Services
Agency for Healthcare Research and Quality R01HS026498 (PI: Landon, Bruce)
Co-investigator
This project aims to study the extent to which a new payment approach designed to improve the overall value of care delivered impacts the delivery of cancer care services and how this compares to a targeted approach.
- 2020-2025 Improving Medicare in an Era of Change
NIH/National Institute on Aging P01AG032952 (MPI: McWilliams/Landon)
PI/Project Leader (\$8,044,494)
Successfully integrating the financing and delivery of care remains a primary goal of the Medicare program after years of expanding efforts, including a recent period of unprecedented experimentation. This Program Project proposal is to supply foundational insights for designing payment systems in healthcare. Our research agenda encompasses four key areas: 1) comparative performance of MA and TM and variants of each; 2) strategies employed by MA plans; 3) learning from state Medicaid programs; and 4) experiences of Medicare patients with dementia and their implications for payment system refinements for patients with special needs.
- 2020-2023 Health Care Markets and Regulation Lab
Arnold Ventures 20-04402 (PI: Chernew, Michael)
Project Leader
The mission of the Healthcare Markets and Regulations Lab is to provide the critical evidence, analyses and tools necessary to support private and public sector innovations that promote high quality health care at a sustainable cost. This project is focused on a single cross-cutting objective: to reduce the rate of health care spending growth through a set of projects related to the health care process, utilization and broader initiatives that affect spending and efficiency. These monitoring activities focused on compiling data critical for related evaluation and policy work, evaluation activities intended to provide critical evidence related to policy actions, and activities directly related to policy development
- 2021-2022 Natural experiments to understand protective effects of Medicaid and Medicare policy during the COVID-19 pandemic for populations with a high rate of dementia
NIH/National Institute on Aging 3P01AG032952-12S2
PI (\$249,043)
This project applies quasi-experimental methods for causal inference to understand how populations with a high prevalence of dementia fared during the COVID-19 pandemic under Medicare Advantage vs. traditional fee-for-service Medicare and under different state Medicaid programs.

- 2022-2023 The Next Phase of Risk Adjustment for Prospective Payment: Advancing Equity and Addressing Coding
The Commonwealth Fund
PI (\$200,000)
This project aims to A) inform equity-motivated adjustments to population-based payments by estimating the relationships between indicators of social disadvantage and total Medicare spending after adjustment for demographic and clinical factors included in current risk adjustment methods (the reallocation toward or away from the group under current methods), and B) explore the use of patient survey data reflecting true health risk to design “smart caps” on risk scores that mitigate incentives for coding while better preserving the ability of current risk adjustment methods to discourage risk selection.
- 2022-2023 Is the 340B Program Contributing to Higher Drug Prices and Spending?
Arnold Ventures (PI: Desai, Sunita)
Co-investigator
- 2022-2027 Examining payment and delivery model impacts on health equity using novel quasi-experimental causal inference methods.
AHRQ R01HS028985 (PI: Hatfield, Laura)
Co-investigator
This project will develop and apply novel methods to study how the Comprehensive Primary Care Plus (CPC+) model has affected care for Black Medicare beneficiaries.
